---

## 1. Signing in

1. Open the TAREQO app on your phone.
2. Type your e-mail and password.
3. Tap Sign in.

> First time? Tap Sign up, fill in your details (name, e-mail, password, business name) and wait for your access to be approved — usually within 24h. You can only sign in after approval.

> Forgot your password? Tap "Forgot password?" on the sign-in screen and follow the link sent to your e-mail.

### Two-Factor Authentication (2FA)

If two-step verification is enabled for your account, after typing your password the app asks for the code from your authenticator app (e.g., Google Authenticator). Type the 6-digit code to sign in.

- To enable or manage 2FA: Menu → Security → Two-Factor Authentication. Keep the backup key shown during setup — it lets you sign in if you lose your phone.
- In SaaS mode, the owner can require 2FA for money operations: Stores → Settings.

---

## 2. Home screen (Home)

The home screen shows your business summary for the active store, with a period pill at the top (Today by default — tap for Week, Month or All) and the active store switcher:

- Sales of the period (with a % comparison against the previous period)
- Cash of the period
- To receive (credit) — with a count of owing customers
- Today's activity: sales, stock intake, credit payments, expenses and alerts — tap an event to see the details.

### Expiry alerts

- Yellow = product is about to expire (less than 30 days of shelf life).
- Red = product has already expired and still has stock.
- Tap the alert to see which product and lot are involved.

### Quick actions

The + button (corner of the screen) opens the action menu: New sale, Add expense, Add product, Add customer and Register credit.

### Navigation

The bottom bar has 4 tabs: Home, Sales, Wallet and Menu. On wide screens (tablet/desktop) navigation becomes a side rail. The Products, Credit and Customers modules live inside Menu (the tab stays highlighted when you open them). Purchases and Reports open from the Menu — owner/manager only.

---

## 3. Stores — which store am I viewing?

The system can have multiple stores (e.g., Central Store, Neighbourhood Store). Each store has its own stock, sales and cash.

- Quick switch: tap the pill with the store name at the top of Home (and on the app bars of Products, Sales, Wallet and Customers) and pick the store — everything shows that store's data instantly.
- You can also switch in Menu → Stores → Settings tab → "Active store" section.

> With a single store, the switcher doesn't appear — there is nothing to choose.

---

## 4. Products

### Adding a product

1. Open Menu → Products → tap New product.
2. Fill in the name and, if you want, the description.
3. Enter the purchase price and the sale price.
4. Stock quantity: enter how many units you have (e.g., 50).
5. Photo (optional): tap the photo area to take a picture or pick from gallery. The photo shows in the product list and helps at checkout.
6. Expiry date (optional): tap Set expiry date and pick the due date. The system warns you when it's about to expire.
7. Sold by weight? Turn on "Sold by weight (fraction)" for products sold per kilo/litre (e.g., bulk rice, bulk oil) and choose the unit (kg, g, l, ml). Checkout then accepts quantities like 1.75 kg.
8. Code/PLU: optional — used by label scales (up to 5 digits) and the barcode reader.
9. Tap Add product.

### Editing / deactivating a product

- Tap a product in the list → Edit product.
- You can change the name, prices, stock (manual adjustment), photo, expiry date and the Active product status.

- Deactivate (Active product off): the product disappears from checkout and purchases but stays in history with its stock kept — you can reactivate it later.
- To remove the photo, tap Remove photo.

> Warning: If the photo can't upload (e.g., no internet), the product is still saved — you'll see a notice and can add the photo later through Edit.

> Filters: at the top of the product list, the filter icon opens search by name, status, stock type, availability and price range.

---

## 5. Sales (Checkout)

1. Tap New sale (Sales tab or the + menu).
2. Search for the product or scan the barcode (camera or label scale).
3. Adjust the quantity (weight products accept decimals: 1.75).
4. Choose the payment method: Cash, Debit card, Credit card, M-Pesa, E-Mola or Bank transfer.
5. Tap Confirm sale.

> Stock is deducted automatically — oldest lot first (FIFO), so nothing expires sitting on the shelf.

### Receipt and sharing

- Tap a sale in the list to see its details (items, total, payment method).
- Share receipt: generate the sale receipt and share it via WhatsApp or another app (you can also share it as an image).

### Cancelling a sale (owner/manager only)

If a sale was made by mistake:

1. Open the sale details → Cancel sale → confirm.
2. Stock returns to the exact lots that were sold (expiry and cost preserved) and the cash is reversed.
3. The sale stays in history marked as "Cancelled" (for auditing), but leaves reports, KPIs and the day summary.

> In SaaS mode with MFA required, confirming a sale (and other money operations) may ask for the authenticator code — that's the server protecting your cash.

---

## 6. Purchases (stock intake) — owner/manager

1. Open Menu → Purchases → tap New purchase.
2. Enter the supplier.
3. Add the purchased products and quantities.
4. Expiry (optional): for perishable products, choose the lot date.
5. Confirm the purchase. Stock increases immediately and the expense leaves the cash.

---

## 7. Customers and Credit

- Customers: register your customers with name, phone and e-mail (Menu → Customers).
- Register credit: when a customer takes goods to pay later, register the amount and due date (+ menu → Register credit).
- On the Wallet → Credit tab you see:
  - Pending = who still owes (total to receive).
  - Settled = history of who already paid.
- When the customer pays, tap Settle debt — the money enters the cash automatically.

---

## 8. Finances (Wallet)

The Wallet tab shows money movements: income, expenses and the balance.

- Add transaction: from the + → Add expense (or from the tab itself, for income).
- Pending: leave it checked if the amount hasn't been received/paid yet — it only counts in the realized cash once received/paid.
- On pending items:
  - Receive (pending income): confirms the money came in → it starts counting in the cash.
  - Pay (pending expenses — bills to pay): confirms the payment → it starts counting in the cash.

### Daily cash closing (Z-report) — owner/manager

In the Wallet, tap the Cash closing card (or the action at the top):

1. The app shows the day summary: total sales, the expected in the drawer (cash only — card, M-Pesa, E-Mola and transfer don't go through the physical drawer) and the breakdown by payment method.
2. Count the physical cash in the drawer and enter it in Counted cash.
3. The app shows the difference live: Cash matches, Surplus or Shortage.
4. Tap Confirm closing.

> Typed it wrong? You can redo the day's closing — the value is updated, no duplicates. After closing, the "Cash closed!" badge appears in the Wallet.

---

## 9. Reports — owner/manager

Open Menu → Reports and see your business performance:

- Revenue (how much you sold in the period)
- Gross profit and margin
- Best sellers (the products that sell the most)
- Sales per day

Use the filters: Today, 7 days, This month, All.

### Exporting and sharing

Tap Export → choose Export CSV or Export PDF. The report is generated and you can share it via WhatsApp, e-mail or save it on your phone.

---

## 10. Stores and Employees (owner)

Open Menu → Stores — there are 4 tabs:

- Stores: register your stores. Each store has its own stock and cash.
- Employees: create accounts for the people who work with you and choose the role:
  - Manager: operates everything, except store/employee management.
  - Employee: sells only (can't add products, see reports, make purchases, close the cash or cancel sales).
  - Deactivate an employee any time — they lose access immediately.
- Upgrades: view and request a plan change.
- Settings: change the Active store, the currency (MZN, BRL, USD, EUR), the language (Portuguese/English/French) and Require MFA for money operations (SaaS mode).

---

## 11. Security (all accounts)

In Menu → Security you'll find:

- Two-Factor Authentication: enable/manage the second factor (authenticator app). With 2FA on, signing in and confirming money operations asks for the 6-digit code.
- Change password: change your password (asks for the current one to confirm).
- Biometric Authentication: unlock the app with fingerprint/face (if the device supports it).

---

## 12. Add-ons (owner)

Menu → Add-ons shows the extras active on your plan (managed by the administrator):

- Custom Invoice: create invoices with your brand layout (logo, colours), per-store automatic numbering and WhatsApp sending.
- Quotations: create quotations with a custom template and track status — draft → sent → accepted/rejected. Exports to PDF.
- Advanced Reports: financial KPIs, products by stock, cash flow and low stock.
- Employee Management: attendance log (clock-in/out), commissions calculated on real sales per seller and monthly targets with progress.
- Store Transfers: move stock between stores of your business — deducted at origin, added at destination, with a traceable history.

---

## 13. Offline sync (SaaS mode)

If the internet drops during a sale, purchase, credit, settlement or cancellation:

1. The operation is safely stored on the device (the app warns "saved offline").
2. As soon as the connection returns, the app re-sends everything automatically — no duplicates.
3. The banner on Home shows how many operations are pending; tap Sync to re-send right away.

> Pending operations may also ask for the 2FA code while syncing, if MFA is required.

---

## 14. Quick tips

- Always double-check the total before confirming a sale.
- Warning: Check the expiry alerts every week — expired product is lost money.
- Products with a photo are much easier to identify at checkout.
- The app keeps your session secure — you only sign in once (and can use biometrics to unlock).
- Need a connection to sell? In online mode yes — but if the connection drops, the sale isn't lost: it goes to the offline queue (section 13) and uploads by itself.

---

## 15. Frequently asked questions (FAQ)

I forgot my password.
Tap "Forgot password?" on the sign-in screen and follow the link sent by e-mail.

I registered but can't sign in.
Your access needs to be approved by the administrator (up to 24h). Also double-check your e-mail/password. If more than 24h have passed, contact support.

It asked for a 6-digit code after my password.
That's Two-Factor Authentication. Open your authenticator app and type the current code. Lost your phone? Use the backup key you saved when enabling 2FA.

Can a deactivated employee still sign in?
Not for long: access is revoked instantly when the owner deactivates them. If an old session is still open, close and reopen the app.

I sold by mistake. How do I undo it?
Open the sale → Cancel sale (owner/manager only). Stock returns to the exact lots and the cash is reversed. The sale stays in history marked as Cancelled.

My stock doesn't match what I counted.
Check for un-cancelled sales, purchases, or manual stock adjustments made in product edit. For a small discrepancy, use the stock adjustment in product edit (owner/manager).

A product photo doesn't show up.
The photo may have failed to upload due to lack of internet at the time (the product is still saved). Open the product → Edit product → add the photo again. If it persists, see the Troubleshooting guide.

The cash closing shows a "shortage".
The "expected in the drawer" only considers cash sales — card, M-Pesa, E-Mola and transfers don't count. Check whether any cash payment wasn't registered or money was taken from the drawer.

Can I have more than one store?
Yes — the number of stores depends on your plan (see Menu → Stores → Upgrades). Each store has separate stock, sales and cash.

Do cancelled sales count in reports?
No. Cancelled sales stay in history (auditing), but leave revenue, KPIs and the day summary.

Can I export reports?
Yes — Export CSV or Export PDF on the Reports screen, and share via WhatsApp, e-mail, etc.

What are Add-ons and how do I activate one?
Add-ons are extras of your plan (custom invoice, quotations, advanced reports, employee management, transfers). They are activated by the administrator — to request one, use Menu → Stores → Upgrades. Once active, they appear in Menu → Add-ons.

The app suddenly changed language/currency?
Currency and language are set by the owner in Menu → Stores → Settings and apply to the whole business, instantly. If they changed, a setting was changed — you can change it back there.

How is the employee commission calculated?
From their real sales (sales registered with the employee's account active), using the rate set by the owner in Menu → Add-ons → Employee Management (500 points = 5%).
